

WORKING AT HEIGHTS SAFETY (Product Code: CS5004)

Course Content

This training module has a theory component delivered in the training room and a practical component delivered in the workshop utilising tasks that your employees undertake as a part of their duties.

THEORY

- Each participant receives a handbook containing the contents of the session
- An outline of the regulatory requirements in regards to working at heights above 2 meters
- Detailed explanation of fall protection practices and devices used in industry
- Practical demonstration in the correct methods of fitting and storing fall protection devices
- Principles behind the process of identifying and controlling hazards in the workplace through the use of a Job Safety Analysis

PRACTICAL

- As a group a practical Job Safety Analysis is completed on a task that is completed in the workplace that poses working at heights risks

OBJECTIVES

- To identify the level of competence of each person working at heights
- To remove complacency and apathy and concern in relation to the inherent risks associated with this process
- To achieve an awareness and respect for the potential for this task to cause serious injuries to all involved

OUTCOMES

- To identify unsafe work practices
- To identify and assess hazardous work practices
- To use the correct equipment for the process involved
- Observe all regulatory requirements
- To report all incidents and faults to the designated person

Occupational Health and Safety

State and Territory regulations all identify the necessity to provide training to employees to achieve a safe working environment. Since 1994 3D Safety Services has been delivering training programs that have assisted clients achieve compliance to the regulations.
